NURNABI ACADEMY · RECORDING SCRIPTS

Paper 2 Revision Paper Intro & Outro Scripts

Version 5 — final, with subscribe and comment calls

Cambridge IGCSE Mathematics 0580 · Paper 2 · Non-calculator, Extended

6 videos · 6 intros · 6 outros · 100 marks

Intros 28–33 s | Outros 33–43 s | read at 155 words per minute

Each script is one continuous paragraph, written the way it should sound when spoken. Read it straight through without stopping; the full stops carry the pauses. All text is selectable: copy any block straight into TTSMaker to rehearse it.

1 Number

Video 1 of 6 · Q1–6 · 19 marks

INTRO 84 words · ~33 seconds @ 155 wpm

> Hello and assalamu alaikum. Welcome to my channel. Thank you for joining me today. This is video one of six in our Paper 2 revision paper, and today our topic is **Number**. Paper 2 is a non-calculator paper: two hours and one hundred marks. Nineteen of those marks are decided in these first six questions. We will cover prime factors, recurring decimals, indices, standard form, surds and reverse percentages. The blank paper is in the description; download it, pause and attempt each question first.

OUTRO 100 words · ~39 seconds @ 155 wpm

> That completes the Number section: nineteen marks. Before you move on, be honest with yourself. Which question did you get wrong? Return to it, watch it once more, then solve it again tomorrow from a blank page. That is how a method becomes permanent. If any step was unclear, please leave a comment below. I read every comment, and I will reply to the best of my ability. And if this video helped you, please subscribe and turn on the notification bell, because video two continues straight on with Algebra. Thank you for watching, and I will see you there.

2 Algebra I

Video 2 of 6 · Q7–11 · 17 marks

INTRO 80 words · ~31 seconds @ 155 wpm

> Hello and assalamu alaikum. Welcome to my channel. It is good to have you with me again. Today our topic is **Algebra**, the first of two parts, and these are the most valuable marks on the paper: roughly one third of Paper 2 is algebra. We will expand triple brackets, simplify algebraic fractions, complete the square, change the subject of a formula and solve simultaneous equations involving a quadratic. Seventeen marks. Please pause and give each question a genuine attempt.

OUTRO 90 words · ~35 seconds @ 155 wpm

> That completes Algebra, part one: seventeen marks. Let me leave you with one piece of advice. Show every line of your working. Examiners award method marks, so a sound method still scores even when the final answer is wrong. If one of these questions gave you trouble, tell me which one in the comments and I will reply to the best of my ability. Please subscribe, and tap the bell, so that video three reaches you the moment it is published: sequences, proportion, functions and differentiation. Thank you for watching.

3 Algebra II

Video 3 of 6 · Q12–15 · 16 marks

INTRO 78 words · ~30 seconds @ 155 wpm

> Hello and assalamu alaikum. Welcome to my channel. Thank you for continuing with the series. Today our topic is **Algebra, part two**, and these are the questions that separate an A from an A-star. We will study sequences, direct proportion, composite and inverse functions, and differentiation with turning points. Sixteen marks. Functions and differentiation appeared in three of the last four Paper 2 examinations, so please give this video your full attention. Pause and attempt each question first.

OUTRO 86 words · ~33 seconds @ 155 wpm

> That completes all of the algebra on this paper. If differentiation felt uncertain, I would encourage you to solve one turning-point question every day this week. Seven days, seven questions, and the difficulty will disappear. If you are still stuck, write your question in the comments and I will answer it to the best of my ability. Please subscribe and turn on notifications so that you do not miss video four: coordinate geometry and circle theorems. Thank you for watching, and I will see you there.

4 Coordinate Geometry & Geometry

Video 4 of 6 · Q16–19 · 14 marks

INTRO 73 words · ~28 seconds @ 155 wpm

> Hello and assalamu alaikum. Welcome to my channel. Today our topic is **Geometry and Coordinate Geometry**: midpoints, lengths, perpendicular bisectors, polygon angles, circle theorems and similar solids. Fourteen marks. One word of caution before we begin. In a circle theorem question, the angle alone earns you nothing; the reason must also be given, in the correct wording. I will show you precisely what the examiner expects. Please pause and attempt each question first.

OUTRO 86 words · ~33 seconds @ 155 wpm

> That completes the geometry: fourteen marks. Your task this evening is a simple one. Write out every circle theorem reason, word for word. Examiners mark the wording, not the idea alone. If you are unsure which reason applies to a particular question, ask me in the comments and I will reply to the best of my ability. Please subscribe before you go, and tap the bell, because video five is the largest of the series: sectors, cones, exact trigonometry, transformations and vectors. Thank you for watching.

5 Mensuration, Trigonometry, Transformations & Vectors

Video 5 of 6 · Q20–23 · 20 marks

INTRO 74 words · ~29 seconds @ 155 wpm

> Hello and assalamu alaikum. Welcome to my channel. Thank you for staying with the series. This is the largest video of the six: twenty marks. Today our topic is **Mensuration, Trigonometry, Transformations and Vectors**, covering sectors and cones in terms of pi, exact trigonometric values, trigonometric equations, enlargement with a negative scale factor and vector geometry. Remember that no calculator is permitted, so leave your answers in terms of pi and in surd form.

OUTRO 91 words · ~35 seconds @ 155 wpm

> Twenty marks completed, and one video remains. This evening, please learn the exact values of sine, cosine and tangent for thirty, forty-five and sixty degrees. They appear constantly, and they are marks you should never lose. If anything in this video was unclear, leave it in the comments and I will reply to the best of my ability. Please subscribe, with the bell turned on, so that the final video reaches you as soon as it is published: probability and statistics. Thank you for watching, and I will see you there.

6 Probability & Statistics

Video 6 of 6 · Q24–26 · 14 marks

INTRO 73 words · ~28 seconds @ 155 wpm

> Hello and assalamu alaikum. Welcome to my channel. Thank you for seeing this series through to the final video. Today our topic is **Probability and Statistics**: calculating probability without replacement, estimating the mean from grouped data, drawing a histogram and reading a cumulative frequency diagram. Fourteen marks. These are the most dependable marks on the whole paper, because the methods never change. Please pause, attempt each question, then check your working against mine.

OUTRO 111 words · ~43 seconds @ 155 wpm

> And with that, the full one hundred marks are complete. Add up your total and share it in the comments; I read every one. If any question is still troubling you, ask me there and I will reply to the best of my ability. One honest reminder: this is a practice paper, not a prediction, so please continue revising every topic. For any topic not covered here, you will find my video *All of IGCSE Mathematics in Ten Minutes* helpful. If this series helped you, please subscribe and keep the bell switched on; there is a great deal more to come. You have done the work. I wish you every success.

Delivery notes

How these scripts are built

- **Greeting and courtesy first.** Every intro opens with a greeting and a word of thanks, and every outro closes with one. Courtesy is not wasted time — it is what makes a teacher sound like a teacher rather than an advertisement.
- **The topic is named within the first fifteen seconds**, in bold in this document, so the viewer knows immediately whether this is the video they were searching for. The channel name is deliberately not spoken; it is already on screen, in the handle, and under every video.
- **Formal register, lively rhythm.** Full sentences and measured vocabulary — "may I leave you with one piece of advice", "I wish you every success" — carried on short clauses so the pace never drags. Formality comes from word choice; energy comes from pace and pitch. The two are not in conflict.
- **One specific instruction per outro.** Not "keep revising", but "write out every circle theorem reason, word for word". Specific instructions get followed; general ones do not.

How to read it

- Read each paragraph straight through in one continuous flow. Let the full stops do the pausing — roughly half a second each — and do not stop anywhere else.
- Warm and unhurried on the greeting; lift the pace from the moment you name the topic. That change of gear is what "lively" actually is: variation, not volume.
- Give the numbers weight: *nineteen* marks, *twenty* marks, *one hundred* marks. The numbers are the credibility.
- Smile on "assalamu alaikum" and on "thank you for watching". It is audible.
- Slow down on the final sentence of every outro. Ending slowly is what makes it feel finished rather than cut off.

On screen

- **Greeting:** face cam. Let them see you before they see mathematics.
- **From the topic onwards:** cut to the section divider page.
- **Video 1 only:** hold the formula page for a few seconds beneath the topic list.
- **Outro:** return to face cam, end screen in the last five seconds.

> **Description boilerplate — goes in every video**
> Blank paper download · Telegram `https://t.me/nurnabiacademy` · Channel `youtube.com/@NurNabiSirIGCSE`
> State plainly in the description that this is a practice paper, not a predicted paper.

The asks — and what the script deliberately leaves out

What every outro now does

- **The subscribe request comes after the teaching, never before it.** Asking at the start costs you retention, because you are taking before you have given. By the outro the viewer has had fourteen to twenty marks explained to them, and the request is reasonable.
- **It is tied to a reason.** Not "please subscribe", but "please subscribe so that video three reaches you". A request with a purpose converts far better than a bare one.
- **The comment invitation is specific.** "Tell me which question gave you trouble" produces far more comments than "let me know what you think", because it asks for something the viewer already has in mind. Comments are among the strongest signals YouTube reads, so this matters as much as the subscribe line.
- **The promise is honest.** "I will reply to the best of my ability" — not "I will reply to everyone", which becomes impossible the moment a video succeeds.
- **The notification bell is folded into the subscribe sentence, never asked for separately.** A standalone "and hit the bell!" adds a beat the outro does not need and sounds like every other channel. Inside the existing sentence it costs about two seconds. It earns those two seconds here because this is a sequential series released over several days: a subscriber whose notifications are off may simply never see video two. The wording is varied across the six so that it does not sound like a loop.

Say these on camera, but keep them out of the written script

- **The like button.** One short line in the middle of the video, not the outro: "if this is helping, a like genuinely helps the channel reach other students". Keep it to one sentence, and never say "smash the like button" — it does not fit your register.
- **Share it with one classmate.** Costs the viewer nothing and is how small education channels actually grow.

Put these in the description and the pinned comment instead

- **Chapter timestamps.** Q1 at 0:42, Q2 at 2:15, and so on. These improve retention, because a student revising one topic can jump to it rather than leave, and they surface in search.
- **A pinned comment on every video** holding the blank-paper link, the playlist link, and the two or three mistakes you expect most students to make. It is the first thing a confused viewer reads.
- **The full playlist link**, so the six videos are watched as a series. Series watch time is worth more than six separate views.
- **The Telegram link** — written, not spoken. Spoken links are never typed out by viewers.

One thing to decide before you record

- The exam-date line ("Paper 2 is on Thursday the eighth of October") has been removed from the final outro. A dated sentence makes the whole video look stale the moment the session passes, and these videos should still earn views next year. If you want the urgency for this session, say it live on camera and keep it out of the script — or put it in the description, where you can edit it later.
